# Chapter 1

## GALAHAD C package sec

### 1.1 Introduction

#### 1.1.1 Purpose

Build and update dense BFGS and SR1 secant approximations to a Hessian.

Currently, only the control and inform parameters are exposed; these are provided and used by other GALAHAD packages with C interfaces.

#### 1.1.2 Authors

N. I. M. Gould, STFC-Rutherford Appleton Laboratory, England.

C interface, additionally J. Fowkes, STFC-Rutherford Appleton Laboratory.

#### 1.1.3 Originally released

May 2008, C interface January 2022.

## Chapter 2

# File Index

### 2.1 File List

Here is a list of all files with brief descriptions:

<a href="#">sec.h</a> . . . . .	5
---------------------------------	---

## Chapter 3

# File Documentation

### 3.1 sec.h File Reference

```
#include <stdbool.h>
#include "galahad_precision.h"
```

#### Data Structures

- struct [sec\\_control\\_type](#)
- struct [sec\\_inform\\_type](#)

#### 3.1.1 Data Structure Documentation

##### 3.1.1.1 struct sec\_control\_type

control derived type as a C struct

##### Data Fields

bool	f_indexing	use C or Fortran sparse matrix indexing
int	error	error and warning diagnostics occur on stream error
int	out	general output occurs on stream out
int	print_level	the level of output required. $\leq 0$ gives no output, $\geq 1$ warning message
real_wp_	h_initial	the initial Hessian approximation will be $h\_initial * I$
real_wp_	update_skip_tol	an update is skipped if the resulting matrix would have grown too much
char	prefix[31]	all output lines will be prefixed by <code>.prefix(2:LEN(TRIM(.prefix))-1)</code> where <code>.prefix</code> contains the required string enclosed in quotes, e.g. "string" or 'string'

##### 3.1.1.2 struct sec\_inform\_type

inform derived type as a C struct

## Data Fields

int	status	return status. Possible values are: <ul style="list-style-type: none"><li>• 0 successful return</li><li>• -85 an update is inappropriate and has been skipped</li></ul>
