# Chapter 1

## GALAHAD C package fit

### 1.1 Introduction

#### 1.1.1 Purpose

Fit polynomials to function and derivative data.

Currently, only the control and inform parameters are exposed; these are provided and used by other GALAHAD packages with C interfaces.

#### 1.1.2 Authors

N. I. M. Gould and D. P. Robinson, STFC-Rutherford Appleton Laboratory, England.

C interface, additionally J. Fowkes, STFC-Rutherford Appleton Laboratory.

#### 1.1.3 Originally released

March 2010, C interface January 2022.

## Chapter 2

# File Index

### 2.1 File List

Here is a list of all files with brief descriptions:

<a href="#">fit.h</a>	.....	5
-----------------------	-------	---

## Chapter 3

# File Documentation

### 3.1 fit.h File Reference

```
#include <stdbool.h>
#include "galahad_precision.h"
```

#### Data Structures

- struct [fit\\_control\\_type](#)
- struct [fit\\_inform\\_type](#)

#### 3.1.1 Data Structure Documentation

##### 3.1.1.1 struct fit\_control\_type

control derived type as a C struct

##### Data Fields

bool	f_indexing	use C or Fortran sparse matrix indexing
int	error	error and warning diagnostics occur on stream error
int	out	general output occurs on stream out
int	print_level	the level of output required is specified by print_level
bool	space_critical	if space_critical is true, every effort will be made to use as little space as possible. This may result in longer computation times
bool	deallocate_error_fatal	if deallocate_error_fatal is true, any array/pointer deallocation error will terminate execution. Otherwise, computation will continue
char	prefix[31]	all output lines will be prefixed by .prefix(2:LEN(TRIM(.prefix))-1) where .prefix contains the required string enclosed in quotes, e.g. "string" or 'string'

### 3.1.1.2 struct fit\_inform\_type

inform derived type as a C struct

#### Data Fields

int	status	return status. Possible values are: <ul style="list-style-type: none"><li>• 0 Normal termination with the required fit</li><li>• -1 An allocation error occurred; the status is given in the component .alloc_status</li><li>• -2 A deallocation error occurred; the status is given in the component alloc_status</li><li>• -3 the restriction <math>n \geq 1</math> has been violated</li></ul>
int	alloc_status	the status of the last attempted allocation/deallocation
char	bad_alloc[81]	the name of the array for which an allocation/deallocation error occurred
